READING

1 **REMEMBER AND CHECK** Mark the sentences **T (true)** or **F (false)**. Then check your answers in the article on page 67 of the Student's Book.

- 0 Titan Moon is the name of a hotel on the moon. T
- 1 Mira Xin is the billionaire woman who owns Titan Moon.
- 2 Star Client is a robot that's in a new film.
- 3 A film has been made with robots because human actors want too much money.
- 4 Shirley Williams is a boxer.
- 5 She has a new hand after a transplant.
- 6 It is possible now (in 2042) to send 3D images of yourself around the world.
- 7 Full-body transportation is still a dream.

2 Read the magazine article. Then match the paragraphs A–D with the answers 1–4.

- 1 Never.
- 2 In about twenty years' time, perhaps.
- 3 Only in about a hundred years' time. A
- 4 Not while I'm still living.

3 Read the article again. Answer the questions.

- 0 What are the two main problems with trying to live on the moon?
There is very little oxygen on the moon and there isn't any animal or plant life.
- 1 Why does Dr Morrison say 'Sorry!' at the end of her answer to question B?

- 2 What are the two main problems with trying to live under the sea?

- 3 Why don't people want to take part in experiments instead of animals?

Will we ever ... ?

Many people have questions about the future – will we ever do X, or Y, or Z? In this week's magazine, Dr Jean Morrison answers some of your questions.

A Will people ever live on the moon?

Angie, London

Not in the near future. There are real problems – the big one is that people need oxygen to stay alive and the moon has very little. And there's no animal or plant life on the moon, so what will we do about food? I think one thing is for sure – it won't be before the next century! And the number of people living there will be quite small.

B Will we ever be able to travel through time?

Paul, Cambridge

Well, people are fascinated by the idea of time travel. But that doesn't mean it'll ever be possible. I'd love to be able to go into the past or the future! But I'm sure we'll never be able to. So my answer to this is no, no chance! (Sorry!)

C Will there ever be cities under the sea?

Anthea, Chester

A lot of people are working on this. But there are lots of problems. One is that people need sunlight, and there isn't much sunlight 100 metres under the sea! And another is pressure – how can we build walls that are thick enough to keep the water out? And where will the energy come from? Personally, I don't think we'll see underwater cities in my lifetime. And to be honest, I'd hate to live under the sea and not see the sun!

D Will scientists ever stop using animals for experiments?

Max, Liverpool

I hope so. The problem is that people don't like using animals to test new medicines and drugs, but they don't really want to use human beings because nobody knows for sure what will happen to the people in the experiment. Some people predict that human beings will replace animals more and more in the next 10 to 20 years. All animal lovers hope they're right. And so do I.

DEVELOPING WRITING

An invitation

1 Read the invitation and answer the questions.

INVITATION

It's party time, everyone! Believe it or not, I'm going to be 15 next month, so please come to my party and help me to celebrate!

Date: Saturday 16th July
Time: From 8 until late!
Venue: The Mill Room at the Grove Street Youth Club

All you have to bring is yourself (beautifully dressed, of course!)

Love from,
 Jenna
 RSVP to jennahall58@gmail.com

- 1 What day and time is the party?

- 2 Where is the party?

- 3 What do people have to bring?

2 Read the replies to the invitation in Exercise 1 and answer the questions.

- 1 Who's going to the party?

- 2 Who isn't going and why not?

To: Jennahall58@gmail.com A

Hi Jenna,
 Wow – another birthday! Congratulations and I'm sure your party is going to be just fantastic!
 Thanks for inviting me, but I'm afraid I can't be there. My mum and dad have already booked our holiday and we're going to Spain the night before your party! Can you believe it?
 I'm so sorry, but have a wonderful time, OK? And maybe we can have our own celebration when I'm back from holiday – how about it?
 Lots of love,
 Susanna

3 Read the phrases. Circle Y (saying yes), N (saying no) or T (saying thanks).

| 4 I'm so sorry, but ... | Y/N/T |
| 5 I'll be there. | Y/N/T |
| 6 I was so happy to get your invitation. | Y/N/T |

4 Read the replies in Exercise 2 again. Put the functions in order.

- 1 Susanna's reply

A apologise	<input type="checkbox"/>
B say thank you	<input checked="" type="checkbox"/>
C suggest another meeting	<input type="checkbox"/>
D say no and give a reason	<input type="checkbox"/>
- 2 Jeremy's reply

A talk about meeting	<input type="checkbox"/>
B say thank you	<input type="checkbox"/>
C say yes	<input type="checkbox"/>

5 Read the invitation. Write two replies, one to accept and one to refuse (about 50–60 words each). Use the language and functions in Exercises 3 and 4 to help you.

Hi!

Listen, I've just passed my big exams and next Sunday night we're going to have a party at my place to celebrate. I hope you can come. It's at 6 o'clock at my house. Please tell me if you can come, OK? Send me an email.
 Hope to see you!
 Best,
 Graham

To: Jennahall58@gmail.com B

Hey Jenna,
 I was so happy to get your invitation! It's hard to believe that you're going to be 15!
 Please count me in. I'll be there. How could I possibly not be? You know that parties aren't the same without me!
 I'm looking forward to being with you on the 16th. Are you sure I can't bring anything?
 See you then if not before.
 Hugs,
 Jeremy

Exam guide: understanding short texts

- In this part of the test you read some very short texts and have to choose the correct answer (A, B or C). The texts could be messages, instructions, signs, postcards, notices, emails, labelling on foods, etc.
- Think about where you might see each text. There might be a visual clue to help you (a TV screen, for example).
- Read each text carefully to get the general meaning.
- Look at each of the options and try to match them up with the information in the text.
- If you can identify false information in any of the options, then eliminate these options.
- When you've made your final choice, read the text again, followed immediately by the option you've chosen, for one final check.

2 Read the texts. Circle the correct option: A, B or C.

| 1 | Films about science in the 20th century | <input type="checkbox"/> | 3 | Scientists in horror films | <input type="checkbox"/> |
| 2 | 'Mad scientists' in books and films | <input type="checkbox"/> | 4 | From <i>Frankenstein</i> to <i>The Fly</i> | <input type="checkbox"/> |

Scientists haven't always been seen as very positive figures. In fact, the idea of the 'mad scientist' has been around for a very long time, and it appears in books and films to this day.

Back in the 19th century, Mary Shelley wrote a story about a scientist called Frankenstein who did an experiment in his laboratory because he wanted to show that he could create life from dead things. He takes bits of dead people and he creates ... a monster, of course, that starts to kill people. The Frankenstein story has produced hundreds of film versions – mostly horror films, although there have been one or two comedy ones.

This is the idea of science as something really quite dangerous. Things can – and probably will – go wrong because the scientists don't really know what they're doing. Another example is the film *The Fly*, which was made in 1958 and again in 1986. Here, a scientist wants to

do an experiment on transportation, but it goes wrong when a fly enters the transportation machine with him. He creates a man with parts of a fly's body, and a fly with parts of a man's body. The slogan of the film was *Be afraid. Be very afraid!*

The idea of the 'mad scientist' was especially strong in films in the second half of the 20th century. A survey was done of more than 1,000 horror films from the 1930s to the 1980s.

In 30% of the films, a 'mad scientist' was the bad guy; in 39% of the films, an enormous danger was created by scientific research that went wrong; and the scientist was the hero in only 11% of them.

Sometimes the scientist isn't the bad guy – he's still a bit crazy, but not dangerous. Take Doc in *Back to the Future*, who turns a car into a machine that can travel in time. With his crazy white hair (just like Einstein) and big eyes, he's the genius who makes mistakes but tries hard and is always nice in the end. And in the TV comedy *The Big Bang Theory*, the scientists are nerds but certainly not dangerous.

But the 'mad scientist' idea never goes away altogether. In the 2008 cartoon *Igor*, there's a whole country (called Malaria) that's run by evil scientists. And in the film, the hero, Igor, builds a person from bits and pieces of other people – and there we are, right back to Frankenstein again!

How technology changes people's lives

1 Match the texts with the life-changing inventions in the list. There are three that you don't need.

penicillin

the aeroplane

the car

the lift

the syringe

the wheel

<p>A _____</p> <p>I think it's very hard to imagine what life would be like without [?]. Life in the country might not be too different, but in cities it certainly would be.</p> <p>Before we had [?], people had to walk a lot more than they do now – up and down, of course, and carrying lots of things. Without it, we wouldn't have towers and really tall buildings like you see in every city in the world. How would you carry all your shopping to your home if you had to walk up to the fifth floor? And it wouldn't be easy to build places like airports, either. How would people go up and down inside with all their heavy suitcases?</p> <p>I think [?] is one of the most important inventions of all time.</p>	<p>B _____</p> <p>Can you imagine what things would be like if [?] didn't exist? Everyone's life would be harder. The work of doctors and hospitals would be a lot more difficult, too.</p> <p>I read once that the discovery of [?] was a kind of accident. Almost a hundred years ago, a scientist in Britain found something surprising in his laboratory and other people discovered how to turn it into this really, really important medicine. It helps people who are sick from many different things, and it's used all over the world.</p> <p>A long time ago, people didn't use to have [?]. Now life is much better because we've got it.</p>	<p>C _____</p> <p>I think [?] has changed people's lives a lot – and not always in a good way. Now that we've got it, people feel freer and they can go to a lot of places much more easily. It used to be very expensive, but prices have gone down a lot in the last twenty or thirty years.</p> <p>If we didn't have [?], things like the food we eat in many countries would be different. Because of [?], now you can get fish, fruit or other things from one country to another in a very short time – a day or less. So in Britain, for example, we can have fresh pineapple for breakfast, and that used to be impossible.</p> <p>But [?] makes a lot of noise and creates pollution. Maybe things would be better without fresh pineapple or holidays in faraway countries.</p>

- B Because I found a better one. And look – I got 92 per cent in the English test!
- B Seventy-nine per cent? That's great. But you used to be really bad at English.
- B Oh, yes? What's it called?

CONVERSATION 2

- A So he doesn't work there any more?
- 1 A I can't go out tonight. I'm working on a presentation about experiments on animals.
- A Your dad? Why?
- A Your dad worked in a laboratory like that?
- B Because he used to work in a laboratory where they tested things on animals.
- B No, he left after a year. Now he works in a pet shop – he loves it!
- B Yes, but he hated it. He used to come home really angry. We used to keep very quiet!
- B Animal testing? Really? You should talk to my dad, then.

CAMBRIDGE ENGLISH: Preliminary

Help with reading: scanning a text

- When you scan a text, you look for specific information – a price, a year, a place, a name, etc. – without trying to read the whole text or understand what it's all about. When you scan a text, it's important that you move your eyes quickly down the page.
- Scanning is a very useful technique if you have little time available and only need certain precise information from a text.

Tip: scanning a text

- To scan a text successfully, you first of all need to know exactly what you're looking for. If, for example, you're reading a text about an invention and want to find out when it's from, you know that the answer will be a year, so you're looking for a number.
- Then try to find quickly where in the text the information can be found. Don't read the text word for word – just move your eyes quickly vertically (up and down) and horizontally (across) the page until you've found the place in the text where the information is.
- Once you've found the place, you need to make sure the information you're taking from the text is accurate. Don't go too fast now – it's better to check twice if you've really found the information you've been looking for.

1 Look at the grid to see what information is missing. Scan the text for the missing information and complete the grid.

JAMES WATT:

Year of birth: ⁰ <u>1736</u>	Place of birth: ¹ _____
Year he started experimenting with steam engines: ² _____	
Year and day of the week when he built the modern steam engine: ³ _____, ⁴ _____	Year he sold his first steam engine: ⁵ _____
Year he stopped working: ⁶ _____	Year he died: ⁷ _____

When James Watt was born in 1736 in Greenock, England, simple steam engines were already used to pump water out of coal mines. These pumps weren't invented by Watt, of course, and nobody knows who first made them. However, Watt is usually called the inventor of the 'modern' steam engine.

The story begins with young Watt, sitting by the fireplace in the little cottage he grew up in. He loved watching the steam rising from his parents' boiling tea kettle in their cottage, and this was the beginning of a lifelong fascination with steam.

In 1763, somebody brought him a model of Thomas Newcomen's steam-pumping engine that was broken and didn't work any more. He asked Watt if he could try and repair the machine.

Watt was excited, and it didn't take him long to get the model going. He was fascinated by it, but soon noticed that it wasted a lot of energy because the cylinder was used both for heating and for cooling. For weeks, he carried out lots of experiments.

On a Sunday afternoon in 1765, while the inventor was going for a walk, he had an idea. He thought that he could make the steam engine much more powerful if he made a second container where the cooling could take place and the steam could be condensed, while the cylinder was kept at the same temperature all the time.

The next morning, he built a prototype and was very happy when he saw that it worked. Watt had invented a much more efficient steam engine.

Shortly afterwards, James Watt and Matthew Boulton started a business together and began selling the Watt steam engine in 1775. Watt's engines were used in the coal mines, but they were much better than the ones used when he was a boy. His engines were also used for transportation and in the textile industry.

Watt was very successful as a businessman, and when he retired in 1800, he'd become a wealthy man. He died in August 1819.

READING

7 Read the article. Match the missing sentences with the spaces A–E.

- 0 and meet to speak it
 1 when *Star Trek* included them
 2 in the 1960s and 1970s
 3 the deepest parts of outer space
 4 played by William Shatner

D

One of the greatest successes ever in science fiction is the TV series *Star Trek*. The person who got the idea for the story was Gene Roddenberry, and the very first episode went on air in 1966. The series features a spaceship – the Starship Enterprise – that has gone out into space on a mission to explore [A] and to make contact with other civilisations. At the time, it was probably the best science fiction on TV or in the movies, and the series was remarkable because members of the crew of the Enterprise included women and people of different races, something that TV [B] didn't show very often.

Some years after the original series finished, a new series called *Star Trek: The Next Generation* was created, with Patrick Stewart as Jean-Luc Picard, the captain of the Enterprise – a quite different figure from the original Captain Kirk, [C].

Star Trek is about 50 years old, but it still has an incredible cult following. There are 'Trekkie' conventions in many places every year. Among the Enterprise's enemies were the Klingons, from the planet Klingon, and a whole Klingon language has been developed. People learn it [D]. There are references to the show in many books, plays and TV programmes. In *The Big Bang Theory*, for example, some of the characters know every episode by heart.

And it's also interesting to observe that some things that were fiction [E] are not fiction any more. Mobile phones and sliding doors, for example, seemed incredible in the early episodes, but now they are part of our everyday lives.

WRITING

8 Write a short text (about 120–150 words) about a science fiction book, film or TV programme that you really like or really dislike. Include the following information:

- what the book / film / TV programme is called
- what it is about
- what you like / dislike about it
